Part I.

Foundations

1. Probabilistic Inference

1. Bayes rule for medical diagnosis

After your yearly checkup, the doctor has bad news and good news. The bad news is that you tested positive for a serious disease, and the test is 99% accurate (i.e., the probability of testing positive given that you have the disease is 0.99, as is the probability of testing negative given that you don't have the disease). The good news is that this rare disease, striking only one in 10,000 people. What are the chances that you actually have the disease?
